

The PSC Magellan 8500 is the World's highest performing POS scanner/scale with OmegaTek™ Productivity Technology yielding the best throughput and first pass read rates that increase the operational efficiency of the checkout.

Each Magellan undergoes rigorous Q&R testing in ISO9001 approved test lab and is subjected to physical abuse like drop and spill tests

The Magellan 8500 is manufactured with top of the line components like scratch resistant glass as opposed to plastic which is used on competing scanner scales.

The Magellan 8500 features the innovative All Weighs Platter which reduces produce shrink at the point of sale. The horizontal and vertical platter join together to make one solid piece that long produce can lean against. The All-Weighs platter also blocks debris from accumulating between the platter and horizontal window.

OmegaTek Productivity Technology is comprised of hardware and software innovations that significantly improve scanner performance by increasing the scanning speed and by improving the first pass read rates on hard-to-read bar codes.

## Magellan 8500 Features

- OmegaTek™ Technology - Leading Speed and First Pass Read Rate
- 6-Side Reading SurroundScan® Technology
- Enhanced Decoding With FirstStrike®
- Enhanced All-Weighs™ Scale Platter
- IntelliCompass® Value Added Features
- True Dual Channel Video Processing
- Multiple POS Interfaces Built In
- RS232 Auxiliary Port
- Flash ROM Memory
- Improved Symbology Auto-Discrimination
- Low Energy Consumption
- High Level of Serviceability and Reliability
- SurroundScan® 360o vertical and horizontal scanning
- Reads bottom, top and all 4 sides
- Optimized for both sweep and presentation scanning
